

Climate Change / Global Warming

Grade 2

Climate change is happening.

There's no denying it. The facts

are clear: the climate is

changing, and these changes

are having a devastating

impact on our planet and its

inhabitants. In this article, we'll

take a look at what climate change is, the impacts it's having right

now, and what you can do to help make a difference. Climate

change is causing the Earth to warm, and this is leading to more

extreme weather events, like hurricanes, floods, and wildfires. It's

also causing sea levels to rise, which is putting coastal

communities at risk.

The good news is that we can do something about climate change.

We can make choices in our daily lives that will help reduce our

carbon footprints. And, we can support policies and initiatives that

will help create a cleaner, greener future for our planet.
