

Reading comprehension
for Grade 3 or 4

Machine learning is the science of getting computers to act without being explicitly programmed. The computer learns to perform a task by seeing how humans perform a task. In the simplest case, machine learning is teaching a computer to recognize objects in images. For example, the computer may take photos of 100 different images and label them, based on specific criteria, as "dog" or "cat" or "car" or "bridge."

1. Write few lines about Machine Learning.
3. What is the link between humans and machine learning?
4. Can we teach a computer to identify cats in a photo?
5. How can we program a computer to identify animals?

To play tennis, you pick up a racket, bounce a tennis ball, and swing your racket around so the ball goes over the net and into the opponent's court. The point of the tennis game is to get the ball over the net and keeping the opponent busy.

Tennis is played all over the world and in all kinds of weather. It's played indoors as well as outdoors. Tennis is played by adults as well as children. Tennis is played in clubs, in parks, on school grounds, and in special constructed tennis courts.

1. Write few lines about tennis?
3. Where do we play tennis?
4. Do schools have tennis courts?
5. How do we play tennis?
6. What is your favorite sport. Explain few lines about it.

The brain is the control center for our bodies and everything we do. It is the organ that carries out our physical senses — sight, hearing, touch and smell — and is our seat of thought, emotion, memory, and reason. Our brains are the most complex organs in our bodies: they are composed of more than 100 billion neurons, with trillions of connections. The number of neurons in a human brain is greater than any other animal's brain, and the human brain is three times larger than a chimpanzee's brain.

1. How is our body controlled?
3. Do brain help in speaking?
4. What is the thing that is interconnected inside the brain?
5. How can we compare our brain size?
6. Why brain is said to be a complex organ?

The modern Olympic Games, commonly known as the Olympic Games, are held every four years. The International Olympic Committee (IOC) selects the host city of the Games, which are held from late July to early August. The Olympic Games, which began in 1896 in Athens, Greece, are traditionally

considered the most prestigious international sporting event. The Games are an important cultural event, providing the host city with an opportunity to showcase its culture. The Olympic Games are sponsored by the International Olympic Committee (IOC), a private, nonprofit organization headquartered in Lausanne, Switzerland, and governed by the IOC Charter.

1. Explain Olympic Games.
3. What is IOC?
4. Where is IOC located?
5. Why does a nation host Olympic Games?
6. Name any 5 sports that are played in Olympics.
