

## Reading Comprehension

Molly is my Math Teacher is an animated children's TV show about a little girl who has a math teacher. The show was created to encourage children to learn math and to have a positive attitude towards it.

$$a^2 + b^2 = c^2$$

The story begins with Molly, an eight-year-old girl, telling us that she loves her mathematics teacher, Mrs. Johnson.

Mrs. Johnson always tells Molly that she can do anything if she tries hard enough and she always helps Molly when she needs help with her homework or other school work in general. Mrs. Johnson also teaches Molly how important it is to have people who care about you in your life and will always help you.

Molly's parents don't really care about her and even though she has the best math teacher in the world, Molly notices that her parents are not around very much.

1. Write about a few points on the animated show?
2. How does the show impact on kids?
3. How did Mrs. Johnson help Molly?
4. How do Molly's parents react in her studies?
5. How does the TV show begin?
